Leading the Way

At Lexmark Carpet Mills, Inc located in Dalton, Georgia, we focus our manufacturing and service resources on providing high-styled carpet to the hospitality industry. You will see in the following pages that Lexmark Carpet has the most comprehensive running line products offered in the hospitality marketplace. In addition to these running lines, Lexmark also offers the ability to develop and design custom patterns and colorations. We have launched a new interactive feature on our website called the Design Portfolio. This tool allows for browsing our custom pattern collections and choosing color placement online. Please visit www.lxdesigns.com to review our patterns and capabilities.

2013 marks a very significant milestone in the history of Lexmark Carpet Mills, as we celebrate 20 years of continued success and outstanding service in the hospitality carpet industry. We recognize that our success is a direct result of our customers' faith and trust in Lexmark's commitment to service and on-time delivery of diverse, high-style, quality products.

We are very proud of our manufacturing facility that puts our corporate headquarters, tufting, extrusion and heat setting under one roof. The larger facility has allowed us to continue to add state-of-the-art manufacturing equipment, allowing Lexmark to acquire the latest technology on the market today.

As the green movement continues to grow, we have positioned Lexmark Carpet to become a go to source for environmentally friendly products. Our in-house solution dyed nylon yarn system, called Lextron Enviro-Green, contains 10% pre-consumer recycled content. The Carpet & Rug Institute certifies these Lexmark products as Green Label Plus. The products we produce are suitable for LEED projects and points can be earned for using Lexmark products.

As we look forward to opportunities for growth and success within the hospitality industry over the next 20+ years, the Lexmark family extends a sincere "thank you" to those customers who have been with us from the beginning. Your patronage is the cornerstone of our success. We also welcome the new accounts that are joining us daily to experience the difference Lexmark Carpet Mills makes by being The Leader in Hospitality Carpet.

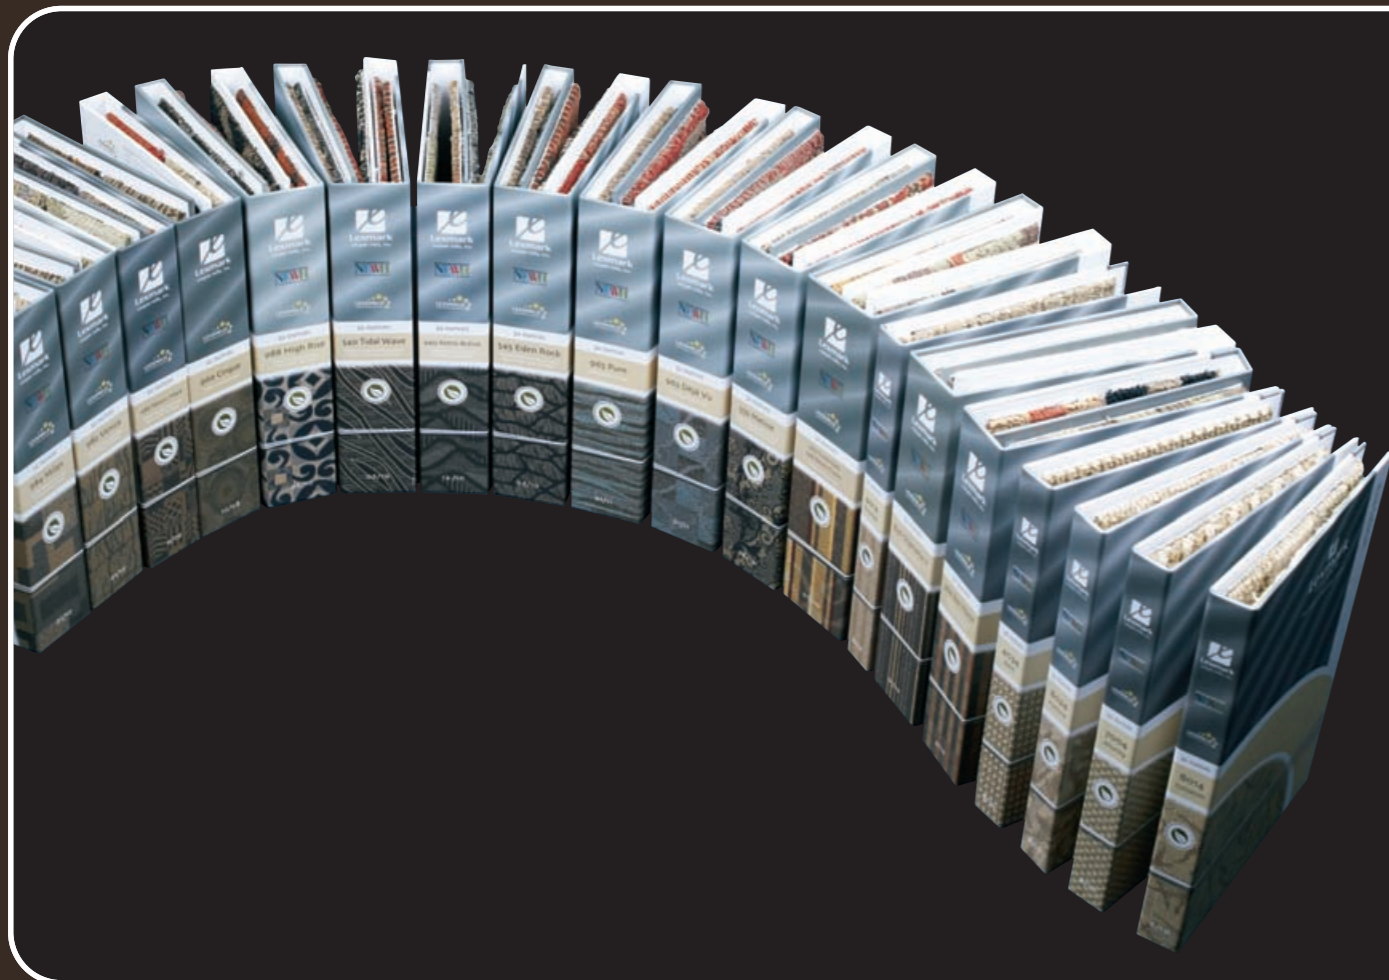

To learn more about Lexmark Carpet Mills, we invite you to visit our website at www.lexmarkcarpet.com for news, updates and to review all of our current styles and specifications.

Sincerely,

Todd White
 President, Lexmark Carpet Mills, Inc.

Company History

Headquartered in Dalton, Georgia, Lexmark Carpet Mills, Inc. is a leading manufacturer of carpet for the hospitality market. Lexmark was founded in 1993 and our products can be found in the guestrooms and corridors of leading hotels worldwide.

Lexmark is a fully integrated manufacturer with state-of-the-art equipment and unsurpassed customer service. Our commitment to the latest manufacturing technology has allowed us to capture market share and we are one of the largest suppliers of guestroom carpeting.

Lexmark solution dyed nylon extrusion supports 9 stocking programs of over 70 colors and 10 barber pole colors. At any given time, Lexmark has approximately 2 million pounds of yarn flowing through our system as finished yarn or in various states of production.

The Lexmark Difference

Lexmark combines large company manufacturing capabilities with a small company focus on customer satisfaction. Lexmark has built the company foundation based on reliability and quality. We have long-standing relationships with a diverse customer base; in fact 9 out of our top 10 accounts have been with us for more than 10 years. Our team has vast experience in the hospitality industry and is always available to help our customers with any issues and offer solutions. Lexmark has a very extensive standard running line product offering that allows our customers a wide selection.

Lexmark should be your first choice for carpeting because:

- Lexmark has the most comprehensive running line carpet program in the hospitality industry.
- Our product offering is updated at least 2 times per year.
- Lexmark works with world-renowned designers to create patterns and colorations.
- Lexmark has increased production capacity during the last 2 years. We have 25 million pound of extrusion capacity and 12 million yards of tufting capacity.
- 94% of our clients are repeat customers.
- We have a very experienced design team to assist you in any of your custom needs.

Lexmark's Green Story

As we all know, the "Green" movement is, and will continue to be a major factor in the way our Customer selects product for projects. Lexmark has taken the steps so LEED points can be garnered using all Lexmark products. The Carpet and Rug Institute has certified all carpets produced by Lexmark Carpet Mills as Green Label Plus (Certification #GLP2380). The certification process ensures that at least 1 LEED point can be earned when using Lexmark Carpet.

From the nylon chip we use to produce our in-house yarn to the sample folders in our Customer's library, Lexmark Carpet Mills is committed to providing an environmentally friendly product to the market place.

Prive' P.E.T

Lexmark is introducing a new fiber to the hospitality and residential market called Prive' P.E.T. The Prive' fiber is extruded in-house and is the perfect option for the customer searching for an economical alternative to nylon.

LEXTRON Solution Dyed Nylon

Lextron Enviro-Green® solution dyed nylon is durable, cost effective and environmentally friendly. Lexmark Enviro-Green contains 10% pre-consumer content and the fiber can be recycled again after the carpet life cycle is complete. The most popular Lextron Enviro-Green® solution dyed nylon colors are extruded, twisted and heat-set in-house with rigid quality control procedures in place to monitor each step of the process. Our Neumag extrusion equipment is state-of-the-art technology designed to produce top quality solution dyed nylon. During the extrusion process, nylon 6 chip and color pigments are combined in a computer controlled environment and heated into a liquid state. This colored liquid mix is then forced through apertures called spinnerets. It is then chilled with cold air into a solid fiber and wound onto cones. The extrusion process dyes the fiber from the inside out so the color is locked in for fade resistance and easier stain removal. Lexmark's twisting process inputs 4.5 turns per inch, before Superbra heat-setting. The twist level is above the minimum recommended by the leaders in the fiber industry.

www.lxdesigns.com

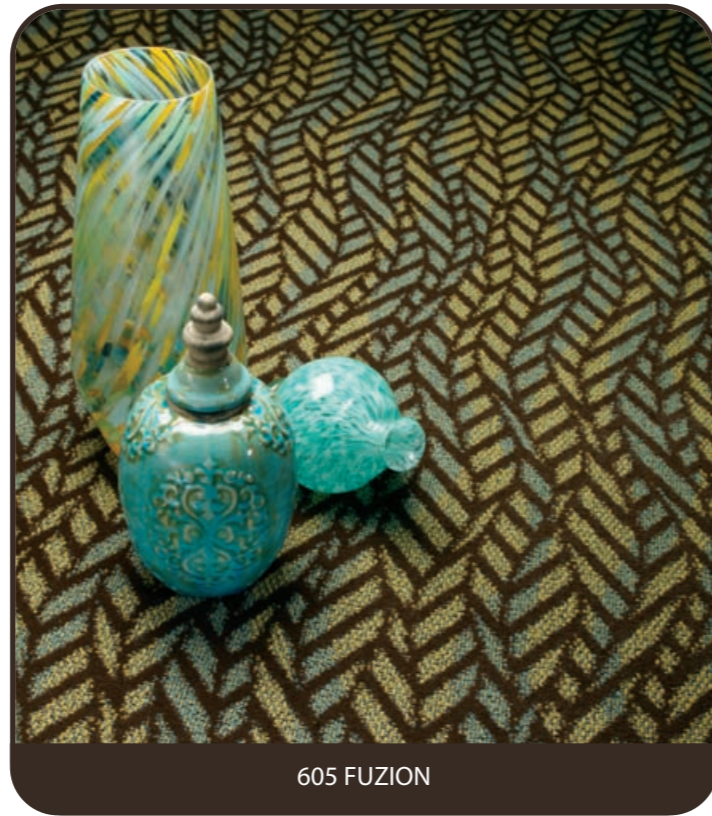

The hospitality carpet market is design driven and custom products are a large portion of Lexmark's sales. Customization can be as simple as changing color placement or as complex as interpreting a hand sketched design into a carpet pattern. Lexmark understands that custom products are a very important part of the business and we have committed ourselves to make the custom process as painless as possible. Our turn around time to produce an in-house custom sample is 3-5 working days.

Recently we launched a new design website www.lxdesigns.com. The site allows the designer to choose patterns, change colors and view the carpet in a virtual room setting. This design system will allow our customers to simulate a PDF Cad and print it off their own computer for immediate access or download and email.

738S SOLID COLORS

Lexmark has updated style 738S solid borders to better coordinate with our stocking corridor products. We have added 12 new colors to bring the stocking number of solids to 36. Style 738S is still the durable 36 ounce 1/10 gauge product available in a standard width of 12ft / 3.65m and is used for borders, caps, cove base, and fill only.

Printed colors may vary from actual carpet colors.

END CAPS

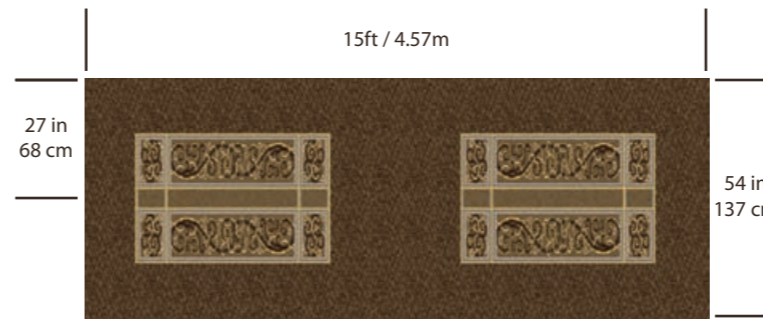

Cap Installation Instructions

1. Loose lay cap section onto field section. Shift cap as needed until both insert field and border patterns are aligned before trimming seams.
2. Caps will have to be top cut in order to assure precise cuts along the edge of the pattern.
3. Corridor section pattern may need recutting to achieve pattern match with cap.
4. Always check pile direction on cap and corridor sections.
5. Seal seam edges. Apply sealer at base of primary backing. (This is a must.)
6. As always, begin pattern matching in center of the seam. This divides the pattern elongation and makes for less work.
7. Irons for hot melt seaming should be set no higher than a 2 1/2 setting. Avoid using narrow tapes with high melt temperatures.
8. Run hot melt seam making minor adjustments with knee kicker. Run short lengths of seam if necessary. Allow to cool and readjust as needed.

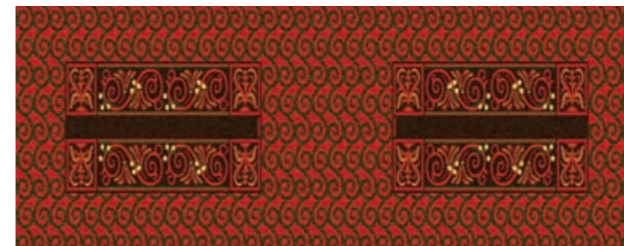

• We do not guarantee an exact pattern match.

CARPET INSTALLATION

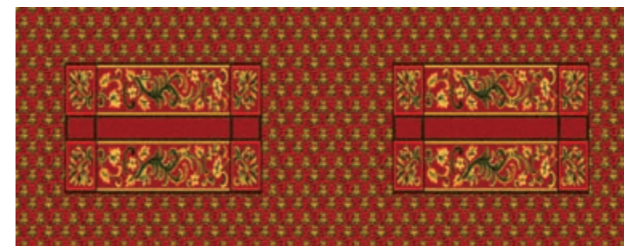

What You Need To Know Before Installing Carpet

2725E SEASCAPE

2775E LOOKING GLASS

2800E PALAZZO

2825E COSMIC SWIRL

Lexmark's running line patterns, and the Custom Patterns in the Design Portfolio, require more time and experience to install than other types of carpet. Make sure your installation company uses Professional Certified Installation crews who are knowledgeable and experienced in the proper installation process.

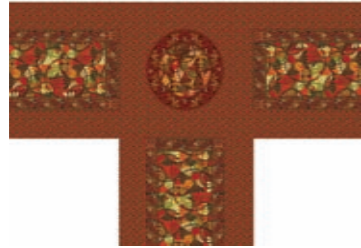

1. Pad recommendation is for a minimum of 8 pounds. A thickness not to exceed 7/16 inch.
2. All warranties apply only to carpet installed over manufacturer approved pad and installed according to current Carpet & Rug Institute installation procedures. (Refer to CRI 104).
3. It is extremely fundamental to know that the pattern in these products are actually tufted into the carpet, not printed on.
4. Cut or trim these products from the face or nap side only. This will enable a better match and seam.
5. Dry fit seams to check for color and texture match. Due to the unique construction of these products the texture of color may vary at seams. If the color of texture does not match, move over 3 or 4 rows and trim the seam. This should reduce the natural appearance of the seams.
6. The layout of the carpet should prevent the flow of light directly across seams. Seams should run the direction of the main traffic. They should not run perpendicular to doorways.
7. All Colortec carpets, due to the manufacturing process, are subject to some pattern run off when pattern matching. We do not guarantee exact pattern match. All Colortec carpet is subject to industry tolerances for bow and skew of 1 1/2 percent.
8. As always, begin pattern matching in center of the drop. This divides the pattern elongation and makes for less work.
9. Seam Sealer is essential to prevent delamination and edge ravel. (Refer to CRI 104).
10. Power stretch the material 1% to 1.5% in both the length and width. Maintain the pattern by use of the power stretcher.
11. Specifications are derived from averages resulting from normal manufacturing tolerances in yarn, fiber, temperature, and humidity, and may vary within normal industry tolerances. Performance is not affected by such variances. Variance may be up to seven percent, plus or minus. Quality control tests to accept or reject goods must be performed prior to cutting and installation.
12. We do not guarantee seamless installation.
13. No claims for out of tolerance material will be accepted after goods are cut or installed.
14. Pattern streaks and banding are visually apparent streaking in patterned carpet resulting from linear juxtaposition of pattern elements visible in both length and width direction. IT IS NOT A CARPET DEFECT, but is inherent in solution dyed graphic and cut/loop patterns. This characteristic may be objectionable in long corridors and other large areas but not visible in small rooms.
15. Corridor installation must be done using long length drops not short width drops. This will eliminate an excessive amount of seams, pattern match, and in some cases, shading of seams.
16. All CRI Installation procedures must be followed during installation. All warranties apply only to carpet properly installed over manufacturing approved pad and installed according to current SRI Installation procedures. SEAM SEALER MUST BE USED. No delamination claims will be honored if these procedures are not followed. (Refer to CRI 104-Standard for Installation of Commercial Textile Floor Covering Materials).
17. Remember, a Certified Master Installer will have experience and equipment to install these products to your expectations and job satisfaction. If you don't have time to do it right, you surely don't have time to do it over.

Be Patient, Be Persistent, Be Professional

CORNER TREATMENTS

In corridors where corners or connections necessitate a change in carpet direction, we offer our corner treatments. This example illustrates several different corner treatment approaches. These corner treatments will be manufactured two to a set.

Bleedout carpet for these Colortec styles are for borders, caps, covebase and fill use only.

A Green Story

Lexmark Carpet Mills, Inc. is committed to providing an environmentally friendly product to the marketplace. From the nylon chip we use to produce our in-house yarn to the sample folders in our Customer's library, we strive to produce a product that is environmentally friendly.

As we all know, the "Green" movement is and will continue to be a major factor in the way our Customer selects product for projects. Lexmark has taken the steps so LEED points can be garnered using all Lexmark products. The Carpet and Rug Institute has certified all carpets produced by Lexmark Carpet Mills, Inc. as Green Label Plus. This certification process ensures that at least one LEED point can be earned when using Lexmark carpet.

Lexmark produces our own Lextron Enviro-Green® Solution Dyed Nylon in-house. The enviro-friendly yarn system uses 10% pre-consumer recycled content. After the carpet's life cycle is completed, the carpet fiber can be recycled again.
